

XTENDIT Plastic Barrier

DESCRIPTION

The barrier **XTENDIT 1550**, jointly with the **MINIT** and **MOVIT™**, has a large number of uses due to its weigh, size, material and geometry. It makes possible, at a lower price, to extend the fenced zone and can be easily placed with no tooling needs. It substitutes other provisional barrier extension systems as cables, plastics, etc. Produced in polypropylene, its geometry makes the barrier to be unique in the market. The owner's artwork can be screen printed in the central bar.

It is made in a single piece and it doesn't need to be assembled. The strong colours and the UV stabilizer melted during the injection process guarantee the selected tone even in very sunny weather conditions. The **XTENDIT 1550** fence combines perfectly with **MOVIT™ 2000** and **MINIT 1250**, making up a compact family of plastic barriers.

COLOURS

XTENDIT is available in:

White
 Yellow
 Orange
 Red
 Blue
 Green

CARACTERISTICS

Wall Thickness: 5 mm to 8 mm
 Weigh: 3,50 Kg.
 Length: 1,55 m.
 Height: 0,30 m.
